

Screen Readers

CCC Confer supports users who have screen reader products such as JAWS, Narrator, etc.

The **Java Accessibility Bridge** allows these screen readers to provide verbal cues in the CCC Confer interface.

For Windows users:

Please download the Java Accessibility Bridge <http://www.illuminate.com/web/download/JavaAccessBridgeSetup.exe> to your desktop. Double-click on the file to complete the installation. This will now allow your screen reader product to function in a CCC Confer meeting.

For Mac OS X users:

Java Accessibility Bridge is already pre-installed on your system with your version of Java.
